Respond 3 Granular Registered

DORCHESTER, ON – **Respond 3 Granular** has received approval from the CFIA in Canada as a turf wetting agent. **Respond 3 Granular** is a new formulation of very popular **Respond 3 Liquid** recently marketed by distributors on behalf of UAP Canada to Canadian golf superintendents to combat water management issues on both ends of the spectrum. **Respond 3 Granular** uses Biodac as an environmentally friendly carrier with a fine particle size suited for closely mowed surfaces on tees and greens.

United Agri Products will begin marketing **Respond 3 Granular** immediately in Canada. “Today’s superintendent is concerned with proper water management to provide healthy turf and optimum playing conditions on their golf course. **Respond 3 Liquid** and now **Respond 3 Granular** is a tool that not only deals with moisture retention during drought periods, the increase in water penetration aids in excess water movement during rainy periods experienced in the late Fall and early Spring,” says Jeff Crampton, National Product Manager with United Agri Products (UAP Canada). “This new formulation will allow the superintendent to apply product in areas that may have been difficult for the liquid,” adds Crampton.

Founded in 1978, United Agri Products (UAP) is the largest distributor of agricultural and non-crop inputs in the United States and Canada. UAP markets a comprehensive line of products, including crop protection chemicals and plant nutrients to national and regional dealers. UAP’s extensive infrastructure is a critical element of their supplier’s route-to-market, as it enables them to reach a highly fragmented customer base.
