GENERAL INFORMATION

10% CALCIUM is a proprietary formulation combining calcium and nitrogen with a special sequestering agent that enhances receptivity and stability. **10% CALCIUM** is recommended for use on row crops, vegetables and fruit and nut trees. When applied in a program of multiple applications throughout the growing season it assures a continuous supply of calcium at or near the time it is needed most to enhance yield and quality.

10% CALCIUM provides calcium in a form which is readily absorbed by crops. Calcium is a key nutrient in cell wall structure, membrane stability and in increasing pectin resistance to pectolytic enzymes. It aids in uptake and utilization of nitrogen. A calcium deficiency can affect quality and yield.
