

Echo[®]. The stronger the better.

Strength. Concentrated.

Echo contains the highly effective contact fungicide chlorothalonil, offering you broad spectrum disease protection. **Echo** fungicide's higher concentration, containing 44% more active ingredient than previously available in Canada, means less handling is required and fewer containers need to be cleaned and disposed of. And Echo comes with **DuraShield™** Technology, a formulation that maximizes adhesion and rainfast properties.

Active Ingredient:

Echo delivers excellent disease protection with chlorothalonil. A contact fungicide that is sold in 30 countries globally.

Echo delivers:

1. Broad spectrum disease control – protecting your crop
2. Higher concentration than previously available – offering convenience
3. **DuraShield** technology – delivering adhesion and rainfastness
4. Multi-site mode of action that is very stable on plant surfaces – trusted protection
5. Choice of two formulations – offering you options to fit your farm

Crops:

Registered on a wide variety of crops including:

- Potatoes
- Chickpeas
- Lentils
- Tomatoes
- Carrots
- Blueberries
- Cranberries
- Ginseng
- Broccoli, Brussel Sprouts, Cabbage, Cauliflower
- Peas (dry)
- Wheat
- Plus many more

A complete list of crops and diseases that **Echo** is registered on can be found at www.uap.ca

Diseases:

Echo fungicide is a proven performer, delivering the long lasting protection you need. Here are just a few of the registered diseases:

- Late blight
- Early blight
- Ascochyta
- Anthracnose
- Botrytis
- Alternaria
- Septoria leaf spot
- Fruit rots
- Downy mildew
- Fusarium
- Plus many more

For timing and rate information, you can view the complete label at www.uap.ca

Rainfast:

The **DuraShield** technology built into **Echo** delivers sticking power to the leaf surface and excellent rainfast properties. **Echo** is rainfast once dry.

You can view **Echo's** sticking power at: http://www.uap.ca/products/products_echo.htm

Formulation Options:

Echo is available in two formulations: dry and liquid.

Echo 720 – 2x9.46L case or 450L tote
Echo 90DF – 10kg bag

“We used Echo last year and it was as good or better than any other product we’ve used in the past. But what makes it more appealing, in addition to the economics, is its ease of use. With the dry formulation (Echo DF), it is a lot easier to handle and measure than other products, and there are no jugs to rinse and dispose of. The Echo DF mixed well and was very compatible with our equipment with no foaming.

But at the end of the day it’s about performance and Echo DF did what it said would do. It stuck to the plants and worked to control the A2 strains of early and late blight in our potatoes.

We plan to use Echo DF on our entire crop next year.”

Excellent formulation that adheres to the plant.

“We’re primarily concerned with controlling the A2 and A1 strains of blight in potatoes. To control these diseases we typically apply a fungicide during early emergence. I’ve used other products, but had handling complaints about them. So, when I was told about Echo DF, we decided to give it a try.

You could see the product on the plants after it was applied. That gave me confidence that it was there working. Based on our experience last year, Echo DF will definitely be part of our treatment program next year.

Not only did Echo DF work, it was also very easy to use – no barrels, no totes and no pumps required. We simply opened the bag, got the product into the sprayer and we were ready to go. There was no foaming of the product, it mixed well and came out of the sprayer with no evidence of clogged nozzles or plugging.

Echo DF is a nice, easy product to use. It did the job that was asked of it and did it well.”

Disease control, adhesion and a nice product to use.

“Echo was a new product that we wanted to try and see what it had to offer. We used the DF formulation on our tomato crop in the 2010 season as part of our preventative program. The product mixed easy through our inductor without plugging or gumming up. Some DF products we have worked with in the past have not mixed as nice and have caused issues. The rinsing of jugs has become a time consuming process for our operator, with the DF formulation we saved time mixing and allowed our sprayer to cover more acres. The DF formulation did not foam in the tank allowing for reduced cost of antifoamers. We tank mixed Echo with another fungicide with no compatibility issues. With the ease of handling and the time savings I would recommend the Echo DF formulation to other growers.”

Ease of handling.
