

Fruitone® L

ONE PRODUCT. NUMEROUS BENEFITS. EASY DECISION. FRUITONE L.

When you put FRUITONE L to work in your orchard, you can obtain optimal fruit size, grades and yields, while promoting return bloom, and managing pre-harvest drop.

NUMEROUS BENEFITS

Reducing fruit load early in the growing season is the best way to improve the quality and size of apples, help maintain the vigor of the trees and improve return bloom.

When used during bloom, petal fall and fruitlet stages, FRUITONE L eliminates weaker fruits. The remaining fruit is larger and better quality.

Furthermore, FRUITONE L can be applied in a variety of weather conditions so growers can thin fruit when they should – giving growers more control over their operation and expenses.

PERFORMANCE ART

The flexibility offered by FRUITONE L can make application seem more like an art than a science with temperature, variety and concentration all affecting results. This versatility is what enables producers to adapt the product to their specific agronomic needs – regardless of location, climate or variety.

FRUITONE L also excels at promoting return bloom on varieties such as Fuji, Jonagold and Golden Delicious, which are prone to biennial bearing. Increased return bloom results in more consistent yields and profitability year after year.

Once the crop is sized and nearing harvest, FRUITONE L applications will control pre-harvest drop allowing for more of the crop to end up in the bin, adding dollars to your bottom line.

For more information on FRUITONE L and how it can benefit your agronomic program, contact your agricultural retailer, or local UAP representative. You also can visit the UAP website at www.uap.ca or call customer service at: Ontario & Maritimes 1-800-265-5444, Quebec 1-800-361-9369, BC 1-604-534-8815

Fruitone® L

ADVANTAGES OF FRUITONE L

FRUITONE L is the most effective product for apple producers to optimize crop load and promote return bloom for next season's crop. Application of this plant growth regulator eliminates the cost of hand thinning without causing damage to the remaining fruit, improving fruit size, finish and uniformity. Applied as a preharvest drop treatment, FRUITONE L also can help manage the harvest schedule.

APPLICATION FLEXIBILITY

With flexible rates and dilution, FRUITONE L can be used to thin blooms on many apple varieties, ranging from easy-to-thin varieties such as Honeycrisp and Idared to difficult-to-thin varieties like Fuji and Golden Delicious.

PROVEN PERFORMANCE

Simply put, FRUITONE L works. Formulated with NAA, which mimics naturally occurring hormones that regulate plant growth. FRUITONE L has been used by fruit growers for decades because they get the results they need.

OPTIMAL AGRONOMICS

FRUITONE L works at low-use rates for easy to thin varieties. It may be combined with most commonly used insecticides, adjuvants and fungicides. Used alone, FRUITONE L is soft on bees and works more consistently compared to other chemical thinners.
