

Inferno™ Duo

No burndown product is more ruthless against hard-to-kill broadleaf and flushing grassy weeds in spring wheat.

Tough broadleaf and grassy weeds have met their match. Introducing new INFERNO™ DUO.

Two active ingredients working together with glyphosate make INFERNO DUO more effective than Express® SG in controlling hard-to-kill weeds like dandelion, hawk's beard, foxtail barley and Roundup Ready® canola. Plus, INFERNO DUO gives you long-lasting control of grassy weeds like wild oats and green foxtail. INFERNO DUO. It takes burndown to the next level.

KEY WEED ACTIVITY

INFERNO DUO + glyphosate

(Refer to glyphosate label for additional weeds)

VOLUNTEER CROPS

All canola, including Roundup Ready
Volunteer barley
Volunteer flax
Volunteer wheat

GRASS WEEDS

Downy brome
Foxtail barley (900 gae/ha glyphosate)
Giant foxtail
Green foxtail
Wild oats

BROADLEAF WEEDS

Canada fleabane
Canada thistle*
Common ragweed
Cow cockle
Dandelion
Flixweed
Hemp-nettle
Kochia
Lady's-thumb
Lamb's-quarters
Narrow-leaved hawk's beard
Redroot pigweed
Russian thistle
Shepherd's purse
Stinkweed
Wild buckwheat
Wild mustard

*Suppressed

INFERNO DUO has two active ingredients that work together to deliver added benefit on key target broadleaf and grass weeds better than *tribenuron* (Express SG).

APPLICATION PROCEDURES

CROPS

Spring wheat

ACTIVE INGREDIENTS

Flucarbazone

Tribenuron-methyl

MODE OF ACTION

ALS-inhibitor (Group 2)

FORMULATION

Water Dispersible Granule

TIMING

INFERNO DUO Herbicide can be applied up to 1 week prior to planting, or immediately after planting prior to crop emergence in spring wheat (excluding Durum wheat). Apply to young, emerged, actively growing weeds that are less than 10 cm in height or diameter.

For best results, apply to weeds that are actively growing in the stages listed on label. Wheat exposed to water-logged or saturated soils, temperature extremes such as hot or cold, drought, low fertility, or plant disease immediately prior to or after application could result in unacceptable injury symptoms. Weed control may also be reduced by these same conditions, or if heavy weed infestations exist, or when applications are made outside the application recommendations.

RATE/PACKAGING

4 pouches in 1 package (1018 g) treats 80 acres

INFERNO DUO + glyphosate 31.5 g/ha + glyphosate

Do not apply more than 15 gal/ha of *flucarbazone sodium* herbicide, the equivalent of one application, or 31.5 g/ha of INFERNO DUO herbicide, pre-plant or post-plant pre-emergence per growing season.

WATER VOLUME

5 - 10 gal/A (50 - 100 L/ha) for ground application

GLYPHOSATE TANK-MIXTURE

INFERNO DUO herbicide may be tank-mixed with glyphosate when applied pre-plant or post-plant pre-emergence. Refer to the appropriate product label for use directions.

MIXING INSTRUCTIONS

Ensure the spray tank is clean. In-line strainers and nozzle screens should be clean and 50-mesh or coarser.

1. Fill the spray tank $\frac{1}{3}$ to $\frac{1}{2}$ full with clean water and begin agitation or bypass.
2. Add the appropriate INFERNO DUO herbicide rate directly to the spray tank. Vigorous agitation is required to dissolve the INFERNO DUO herbicide. Maintain sufficient agitation during both mixing and application.
3. Add the Glyphosate herbicide.
4. Complete filling tank with balance of water needed. Apply in a spray volume of 5 to 10 gal/A (50 to 100 L/ha) to ensure proper weed coverage.

CROP ROTATIONS

INFERNO DUO can be used in a wide variety of crop rotation programs based on soil types and prevailing climatic conditions. Refer to the INFERNO DUO label to determine how INFERNO DUO fits into your crop rotation plans.

RAINFASTNESS

1 hour
