

# PERFORMANCE...

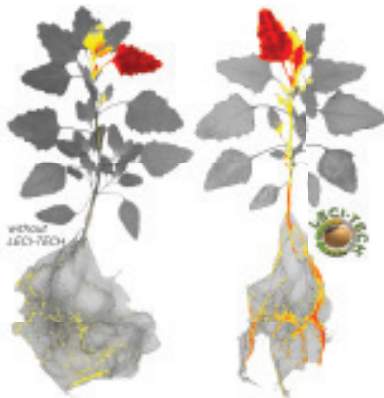

## << DRIFT REDUCTION

LECI-TECH® products not only reduce driftable fines, but does so without increasing the number of "too large" droplets.

**DROPLET RETENTION >>**  
LECI-TECH products ensure that more droplets hit the target and stay there to provide more consistent control.

White clay solution was used as a visual marker.

## << PENETRATION

LECI-TECH products provide quicker uptake with no impact on crop safety to maximize pesticide and nutritional product performance.

The red color indicates amount of glyphosate solution taken into the plant.

## ACIDIFIER >>

LI 700 with LECI-TECH allows you to adjust the pH of your water to ensure your pesticide investment is not lost. Many pesticides undergo a chemical reaction in the presence of alkaline water that reduces their effectiveness. LI 700 pH Adjuster is a buffering-acidifying agent that changes the pH of a spray solution and keeps it there.

**Mixing Order:** LI-700 should be added to the tank last unless you are utilizing as a pH adjuster.

**...MADE EASY!**

**Target Chemistries:** weak acid herbicides (i.e. ALL glyphosate formulations, 2,4-D, dicamba, etc.), insecticides, defoliants and nutritionals.\*

\*Always read and follow label directions.
