

Mecoprop-P

HERBICIDE

Mecoprop-P is a liquid herbicide for use on grasses (including turf, golf greens and fairways) and cereals. It controls tough broadleaved annual and perennial weeds.

GUARANTEE: Mecoprop-P 150 g/L (d-isomers equivalent present as potassium salt).

CROPS: Barley, bentgrasses, bluegrasses, oats, red fescue, rye grasses and wheat.

RATE: 5.5-8.5 L/ha (60-90 ml/100m²) (2.2-3.4 L/acre).

WATER VOLUME: Use 300-400 L/ha at a pressure not to exceed 275 kPa (27-36 gallons/acre). On small areas, apply at the recommended rates in 10 L of water/100 m². In cereals, apply in 200-300 L/ha (18-27 gallons/acre).

TANK MIXES: On fairways and lawns, MCPA Amine 500 (3 L/ha) or 2,4-D (6.6 L/ha).

TIMING: For best results, apply to young, actively growing weeds in the 2-4 leaf stage. Treat wheat, oats and barley from the time the crop is in the 3-leaf expanded stage to the early flag leaf (shot blade) stage. Application can be made to seedling or established grasses.

WEEDS CONTROLLED

Grasses – 5.5 L/ha for seedlings, 8.5 L/ha on established plants.

Susceptible weeds

Common chickweed

Mouse-eared chickweed

Clover

Plantain

Moderately susceptible – 8.5 L/ha

Black medic

Creeping charlie

Buttercup

Dandelion (with 2,4-D)

Wheat, barley and oats

Seedling 5.5 L/ha, mature 7 L/ha

Black medick

Corn spurry

Canada thistle
(top growth only)

Lamb's quarters

Chickweed

Plantain

Cleavers

Stitchwort

Clovers (volunteer)

Wild mustard
