

Now with Drench Label!

RHAPSODY®

RHAPSODY® is the only product to provide effective control of a wide array of both bacterial and fungal pathogens, while providing unsurpassed plant, human and environmental safety.

FOR FOLIAR DISEASES

RHAPSODY is the only biological bactericide/fungicide that is an effective alternative to coppers for bacterial diseases, such as *Erwinia* and *Xanthomonas* and to synthetic chemicals for fungal pathogens such as powdery mildews and *Botrytis* gray mold. With a 4-hour re-entry interval and a 0-day preharvest interval, RHAPSODY provides growers flexibility and labor costs savings.

FOR SOIL DISEASES

RHAPSODY is a broad spectrum biofungicide for the prevention, suppression and control of soil borne diseases on a wide range of annual and perennial bedding plants, potted flowers, foliage plants, deciduous trees and shrubs, and fruits and vegetables grown in protected environments. RHAPSODY enhances germination and plant growth by suppressing diseases caused by *Rhizoctonia*, *Pythium*, *Fusarium* and *Phytophthora*. Important Note: RHAPSODY is registered for soil applications ONLY in protected growing environments such as glasshouses or greenhouses.

RHAPSODY:

- Is OMRI-Listed and Can be Used in Organic Production (NOP)
- Is now labelled for Soil Drench and Chemigation applications
- Has proven efficacy against BOTH bacterial and fungal pathogens
- Is unsurpassed in plant and human safety
- Leaves virtually NO deposits on plant foliage or flowers
- Performs on par with copper-based products, without phytotoxicity or deposits
- Requires only a 4-hour re-entry interval
- Can be sprayed up to and on the day of harvest
- Controls disease using multi-site modes of action for resistance management
- Is non-toxic to beneficial insects and predatory mites
- Is compatible for tank-mixing / rotating with other registered inputs

DISEASES CONTROLLED

RHAPSODY controls common fungal diseases such as Powdery Mildew, Botrytis, Anthracnose and several leaf spot diseases such as *Alternaria* and *Entomosporium*. RHAPSODY also controls bacterial diseases such as *Pseudomonas*, *Erwinia*, and *Xanthomonas* spp., as well as soil diseases *Rhizoctonia*, *Pythium*, *Fusarium* and *Phytophthora*.

MODE OF ACTION

Based on a naturally occurring patented strain of *Bacillus subtilis* (strain QST 713), RHAPSODY is equipped with a suite of naturally occurring antifungal and antibacterial lipopeptide compounds. These compounds utilize multiple modes of action to destroy pathogens, making RHAPSODY an effective resistance management tool. RHAPSODY is therefore a valuable addition to any disease control program that is vulnerable to the development of resistance.

RECOMMENDATIONS

RHAPSODY can be applied in greenhouse, field, interior-scape, residential and commercial landscapes and shadehouse environments on a wide array of bedding plants, potted plants, cut flowers, tropical foliage and container grown trees, shrubs, and ornamentals.

RHAPSODY is a bactericide and fungicide. Ideally, it should be used when conditions favor disease development, but before the onset of symptoms. It may also be used at the first sign of disease symptoms. Since RHAPSODY controls diseases through multiple modes of action, it is ideally suited for programs aiming to manage resistance. If employing chemical fungicides with a single site of action, it is best to break up the chemical cycle by rotating RHAPSODY into the program.

COMPATIBILITY

RHAPSODY is a liquid formulation with very high suspendibility. It is compatible with a wide range of pesticides, fertilizers and adjuvants, including many commonly used spreaders/stickers and organosilicone wetting agents. The use of adjuvants or a spreader/sticker or wetting agent is strongly recommended to improve canopy penetration and coverage.

Maintain a spray solution pH between 4.5 and 8.5. Unlike copper-based bactericides, RHAPSODY may be used with such pH lowering materials as fosetyl-AL, phosphonic acids and daminozide without causing injury to plants.
