

SIMAZINE 480

Your time is important so let Simazine keep your ornamentals and nursery stock weed free.

Simazine Herbicide provides long-term weed control with just one application. Registered on a number of crops, including woody ornamentals and nursery stock, it controls and prevents regrowth of most annual and perennial weeds and grasses. Simazine has little or no foliar action and is absorbed through the root system of the weed, therefore rain or irrigation is necessary to activate the herbicide. Once in the plant, it interferes with the formation of chlorophyll, which is necessary for growth. Simazine is an easy to use liquid formation that will offer you the residual control to save you time during the busy growing season.

Active Ingredient:

Simazine is a triazine herbicide that can be applied before or during weed emergence depending on soil moisture and the type of weeds

Crops:

Simazine is registered on apples, pears, loganberry, raspberries, grapes asparagus, woody ornamentals and nursery stock. See chart below for listing of woody ornamentals and nursery stock:

Cedar (Arbor Vitae, Thuja spp)	Hemlock
Barberry	Juniper
Apple (non-bearing)	Multiflora rose
Flowering crabapple (Malus spp.)	Peony
Boxwood	Blue spruce
Cotoneaster	Norway spruce
Dogwood	Red spruce
Holly	White spruce
Rose	Mugho pine
Yews (Taxus spp.)	Black walnut
Chamaecyparis	White ash

Weeds Controlled:

Broadleaves: Lady's Thumb, Lamb's quarters, Purslane, Ragweed, Volunteer clovers, Wild buckwheat, Smartweed.

Annual Grasses: Barnyard grass, Crabgrass, Wild oats, Yellow foxtail. Simazine will also control most perennial species starting freshly from seed.

Application Timing:

Apply 4.7-7 L in 300 L of water/ha in the fall or spring prior to weed emergence. Rainfall is required to move the product into the root zone. If weeds have emerged, hoe or cultivate before application. Apply before buds break in spring. Apply as a directed spray only. Avoid spray contact with desired woody ornamental and nursery stock. Use 4.7 L/ha for sandy or low organic matter soils. Use 7 L/ha for clay or high organic matter soils. Simazine offers great residual control but does have some plant-back restrictions so always read and follow label directions.

Water Volume:

300 L of water/ha

Package Size:

Simazine is available in 2 x 9.46 L jugs.

Storage:

Store in a dry area in original container. Do not freeze.

Free up your time and let Simazine keep your woody and nursery stock weed free.
